

BrightPath Tech

Fast, cost-conscious procurement automation with a lightweight implementation model

Artificial / Synthetic Supplier Proposal

Procurement Automation & Supplier Evaluation Platform

Executive Summary

BrightPath Tech offers the lowest-cost and fastest proposal in this synthetic comparison. The solution focuses on a hosted web application, rapid document upload, configurable scoring forms and a simple supplier workspace. The approach is intentionally lean and prioritizes speed-to-value. The proposal provides limited detail on compliance controls and has less demonstrated delivery experience than the other suppliers.

Understanding of the Requirement

- Give procurement teams a quick way to collect supplier proposals and compare responses against standard criteria.
- Provide configurable evaluation templates and a consolidated view of supplier scores.
- Enable evaluators to review source evidence alongside AI-generated summaries.
- Launch a usable first release quickly, then add integrations based on actual adoption.

Proposed Solution

- Multi-tenant SaaS web application with browser-based evaluator access.
- Cloud object storage for proposal files and managed database for supplier/evaluation records.
- PDF text extraction followed by structured LLM prompts for criterion-level summaries and scores.
- Simple REST API for importing supplier metadata and exporting results.
- Email-based notifications for evaluation assignments and completion.

Proposal positioning: This document is intentionally synthetic and designed for classroom evaluation. It contains explicit strengths, limitations, assumptions and evidence so that an evidence-grounded LLM evaluator can distinguish suppliers rather than assigning identical generic scores.

Solution Architecture & Implementation

The following architecture is presented at proposal level. Where a supplier has not provided enough detail, the document explicitly identifies the item as an assumption or discovery dependency.

Layer	Proposed approach	Evidence / assumption
Experience	Responsive browser application.	No separate mobile application is proposed.
Application	Managed SaaS services with serverless/API components.	Reduces operational overhead.
Data	Managed relational database and cloud file storage.	Standard provider encryption is assumed.
AI	JSON-formatted LLM response validated before display.	Model/provider selection is not finalized.
Integration	REST import/export and email notifications.	Enterprise SSO and complex legacy adapters are not detailed.

Implementation Timeline

Phase	Duration	Key milestones
Configuration	1 week	Criteria, roles and branding
Build & integration	3 weeks	Portal, document upload and scoring workflow
AI evaluation setup	1 week	Prompts, output schema and validation
UAT & training	1 week	User testing and administrator training
Go-live	1 week	Production launch and stabilization

Delivery Team & Governance

Role	Allocation	Responsibility
Delivery Lead	0.25 FTE	Coordination and customer communication
Full-stack Engineers	2 FTE	Application and API implementation
AI Engineer	0.5 FTE	Prompt and JSON workflow
QA Engineer	0.5 FTE	Core functional testing
Support Analyst	0.25 FTE	Post-launch support

Delivery governance: The supplier will provide weekly delivery reporting covering completed work, next milestones, decisions, risks and dependencies. Customer sign-off is expected at agreed phase gates.

Commercial Proposal

The following figures are fictional and intended only to create meaningful commercial differences among the four artificial suppliers. Pricing assumptions are part of the evidence available to the evaluator.

Component	One-time	Annual / recurring
Configuration & setup	\$18,000	—
Application implementation	\$64,000	—
AI workflow	\$22,000	—
Data migration allowance	\$8,000	—
Training & launch	\$6,000	—
SaaS subscription	—	\$36,000/year
Estimated total	\$118,000	\$36,000/year

Commercial Assumptions

- This is the lowest synthetic bid and is optimized for rapid deployment rather than extensive customization.
- Pricing assumes standard cloud capabilities, limited custom integration and up to 1,000 proposal documents per month.
- Premium security reviews, custom SSO work and non-standard compliance documentation are not priced in this proposal.

Security, Compliance & Risk Controls

- HTTPS/TLS for application traffic and cloud-provider encryption for stored files.
- Application roles for administrators, evaluators and viewers.
- Daily backups with a stated 30-day retention target.
- Basic activity logging for sign-in, uploads and evaluation completion.
- Supplier states that privacy and security controls will follow the selected cloud provider's baseline practices.
- Specific certifications, independent audit reports, detailed retention policy and formal incident-response commitments are not provided in this proposal.

Risk Register

Risk	Mitigation	Residual concern
Limited compliance detail	Complete a security questionnaire during onboarding.	Formal certifications and audit evidence are not yet supplied.
Rapid delivery	Use a fixed MVP scope and weekly demos.	Complex requirements may need a later phase.
Vendor dependency	Use exportable JSON/CSV and documented APIs.	Long-term portability details require further agreement.
AI variability	Validate JSON and allow evaluator edits.	No detailed model governance framework is proposed.

Support, Experience & References

- Business-hours email and ticket support.
- Target first response within 4 business hours for standard issues.
- Monthly release cadence with advance notice of material changes.
- Online administrator guide and two remote training sessions.
- BrightPath describes experience delivering lightweight workflow and SaaS applications for small and mid-sized organizations; only limited specific project detail is included.

Relevant Experience / References

- Reference A — Synthetic SaaS workflow deployment, 4-month implementation.
- Reference B — Synthetic document intake application, 6-month deployment.

Known Limitations & Items Requiring Clarification

- Compliance evidence and certification details are limited.
- Enterprise SSO, complex integrations and formal model governance are not fully specified.
- Support commitments are lighter than the other proposals.
- Relevant experience is described only at a high level with limited project detail.

Traceability Notes for Evaluation

This proposal is written so that each evaluation criterion can be assessed from document evidence: **Technical Capability** from architecture and integration sections; **Implementation Plan** from timeline, milestones and team; **Commercial Value** from the price table and assumptions; **Security & Compliance** from controls, limitations and risk register; and **Support & Experience** from the service model and references.

Important: Any statement not explicitly supported in this proposal should be treated as missing evidence by an evaluator. The supplier should not receive credit merely because a capability would be reasonable or common in the industry.
